VOLUMETRIC LIGHT

Presenting Elia

Volumetric Light

Light speaks volumes through Elia, a collection of decorative luminaires with LED arrays illuminating both inward and outward from housings offered in round, square, rectangular, oval, and multiple configurations, in sizes ranging from 2' to 8' in diameter.

Elia's simultaneous inward and outward distributions create distinct volumetric light—perfect for making a statement, reinforcing a design language, establishing a focal point, or adding character to a space.

With Elia, both the luminaire and the light it casts become key elements of an interior design.

Elia

Optics & Performance

Elia offers a decorative flair to architectural spaces all the while enhancing them with an abundance of illumination. The lighting family provides volumetric light that distributes widely, creating rich luminous spaces without the shadowing sometimes caused by certain direct/indirect luminaires and inward-facing lenses. Elia offers up to 93 lm/W, yet maintains an impressive CRI of 90+.

Not only a Luminaire,
but also a **work of art.**

Featuring Elia in round in single mounted and multiples with Via 2 recessed on the right side.

Offering at a Glance

With four shapes and multiples—fixtures composed of two or three sizes of the same shape—the Elia family offers the design flexibility to make an impact in a wide variety of settings.
