ELEGANTLY POWERFUL

A sophisticated lighting choice, Voilà allows for targeted beam angle control and uniform illumination. Featuring impeccable HyFlex™ optics for flexible contrast, brightness and color control, Voilà shines on its own or alongside complementary lighting. Crafted with the utmost precision—available as downlights or cylinders.

Designed for pure lighting performance, Hyflex™ optics provide precise optical control in a stylishly compact form. Powering this four-tier system is a compound reflector with a central TIR element at a depth of only 1.06", and optional beam-smoothing lens for beam angles up to 90°.

With Hyflex™, beams can be changed on-site from a narrow spot to open floor, via a quad-tiered optical system. This allows for enhanced beam control, multiple beam patterns and field adjustability, all in a single luminaire.

Tested and guaranteed for optimal chromatic consistency and reliability, Hyflex™-driven Voilà fixtures deliver stunning color, custom modules and color tuning for a wide variety of applications. Designed and manufactured in-house from start to finish.

### FIELD INTERCHANGEABLE OPTICS

# Voilà Downlights

Elegant and refined, Voilà downlights and wall washers deliver precise, uniform, low-glare illumination. Fixed or adjustable optics support field-modifiable beams, allowing light distribution to be adapted on site. The result is a flexible lighting solution suited to offices, art galleries, retail, and residential settings.

## Downlights

Voilà downlights and wall washers are available in round and square apertures. Downlights adjust vertically by 30° using a screw-thread mechanism and rotate 360° horizontally. HyFlex™ optics enable field-interchangeable beam angles from 10° to 90°. Models are offered in trim or trimless configurations with optional Chromawerx Sola or Duo integration.

## Construction

Manufactured in our own facility, Voilà downlights feature precision-engineered construction for long-term performance and durability. A 2-Click switch system enables switching between fixed and adjustable configurations. Additional features include in-field tilt, a 10°-90° beam disc for optical control, and robust heat management.

### ADJUSTABILITY FOR VOILÀ 2", 4"

Downlights adjust 30° vertically with screw thread mechanism and rotate 360° horizontally.

# Installation Options

Beautiful on the ceiling.  
Just as exceptional above.

Solve above-the-ceiling challenges with Type IC, Chicago Plenum and Open Frame housings, and manage heat with a cold-forged static aluminum assembly. Coupled with our programmable and proprietary LumenWerx Light Engine, Voilà lets you customize lumen output, all in a luminaire no thicker than 4".

# Voilà Seal & Voilà 4 Seal MRI

Introducing a new class of downlights sealed and constructed for outdoor spaces and healthcare, including MRI rooms. Across the board, expect precision optics and outstanding light quality, housed in a robust, user-friendly package. Voilà Seal models are suitable for wet and damp locations, while Voilà 4 Seal MRI are specifically manufactured with non-ferrous materials for MRI-safe lighting solutions. Both offer impeccable engineering, and superior control.

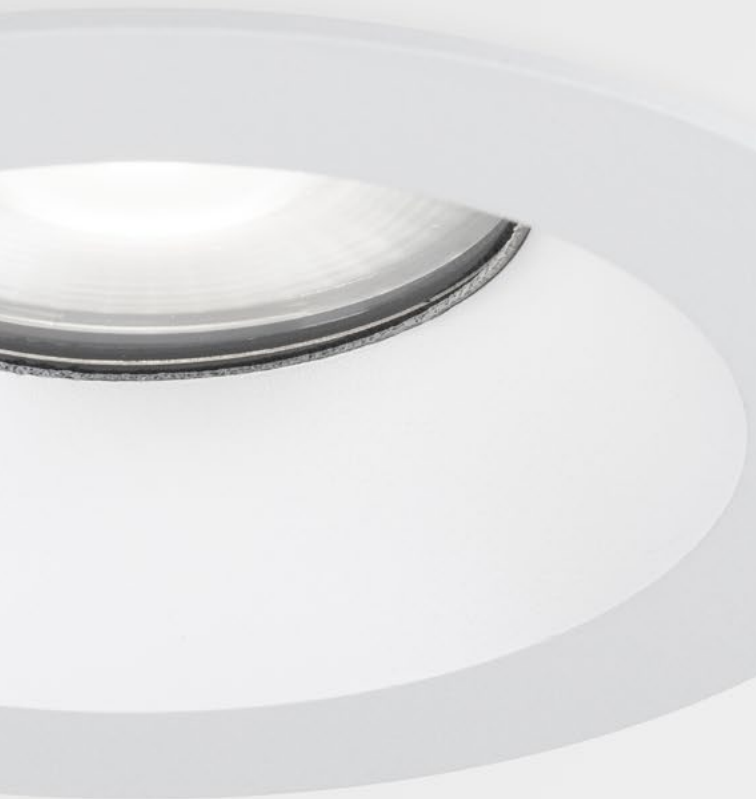

# Voilà Seal

Offered in eight distributions, Voilà Seal is a fixed downlight suitable for any application where moisture may be an issue. Intelligent and easy to use, the collection includes HyFlex™ optics, an integrated quad-tiered optical system for enhanced beam control, multiple beam patterns and complete field adjustability—all from one single luminaire.
